

## Metro Ports Savannah Adds Capabilities

Metro Ports continues to expand in the Savannah market by adding additional assets to increase its capabilities. Since the fourth quarter of 2008, Metro invested almost \$500,000 in new cargo-handling assets at the Savannah terminal. These assets include: an additional hopper with a capacity of forty short tons, two 14 cubic yard radio controlled grabs, a Mettler Toledo 7260 rail scale, and a rail car loading system. These resources will increase productivity and set Metro Ports Savannah ahead of its competition.

In addition, Metro offers the largest private rail yard in Savannah with a capacity of two hundred and twenty rail cars. We are scheduled to begin loading outbound rail cars by the end of May and providing our customers with certified rail weights.
